### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: None of the documents cited disclose a fuel delivery system including collecting means for collecting vaporized liquid gas; a bleed injector for delivering the collected liquid gas vapour to the cylinder of the engine and an injector being located in the debubbling chamber as defined in claim 1. They also do not disclose a fuel delivery system including a chamber for receiving an injector, a liquid gas inlet communicating with a lower portion of the chamber, an outlet arranged in the upper portion of the chamber and a pressure regulator as defined in claim 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Art Unit: 3747

### NEW ABSTRACT

A fuel delivery system for an engine is disclosed which includes an injector (20) and a housing (3) for supporting a fuel injector (20). A regulator (202, 313) is provided for regulating the pressure of fluid in the housing to maintain the pressure at about supply pressure, and the pressure downstream of the regulator at a low pressure so that fuel which passes the regulator is able to evaporate. The evaporated fuel is supplied to a heater (250) to heat the fuel, and the vapour is supplied to a vapour injector (260) for injection into the engine. The passage of the liquid petroleum gas fuel through the housing (3) cools the injector (20) to maintain the fuel in a liquid state, and therefore prevent boiling of the vapour within the injector.
